Homework 10: More Problem Solving Using Feature Theory

1. Do the Standard Ukrainian problem on p. 208-209 of Chapter 7. Remember to write your rules using feature theory, and to generally follow the guidelines for writing up data analysis problems.
2. Explain why /s, m/ --> [l, k] / ____ [w, š] is not a rule that you are likely to find in any data analysis. Explain why /p/ --> [č] / ____ [i] is not a rule that you are likely to find in any data analysis. Why are the answers to these questions different?
