With all this ambiguity, how does child learn meaning?
Roger Brown ’57: kids use syntactic categories to guide word learning
Roger Brown ’57: kids use syntactic categories to guide word learning

- subjects: 3- to 5-year-old children

- stimuli: someone kneading dough / cutting cloth / ..., followed by:
  - (a) 'show me the sib'
  - (b) 'show me some sib'
  - (c) 'show me sibbing'

- measure: what subjects pointed to

- results:
  - (a) 'show me the sib' — subjects indicate bowl/knife
  - (b) 'show me some sib' — subjects indicate dough/cloth
  - (c) 'show me sibbing' — subjects make kneading/cutting gesture

Brown thought these vary across languages (e.g. no count/mass distinction).
Roger Brown ’57: kids use syntactic categories to guide word learning

- **subjects:** 3- to 5-year-old children
- **stimuli:** someone kneading dough / cutting cloth / ..., followed by:
  - (a) ‘show me the sib’ (count noun form, following ‘the’)
  - (b) ‘show me some sib’ (mass noun form, following ‘some’)
  - (c) ‘show me sibbing’ (gerund form, with suffix ‘-ing’)

Brown thought these vary across languages (e.g. no count/mass distinction).

Sylvia Yuan & Cynthia Fisher ’09: extend Brown results to syntax

Subjects: 2-year-old children
Stimuli: recorded sentence:
(a) ‘She blicked!’ (intransitive)
(b) ‘She blicked her!’ (transitive)
followed by images of person raising arm, pulling another person’s leg
followed by request: ‘Can you show me blicking?’

Measure: what subjects pointed to

Results:
(a) ‘She blicked!’ — person raising arm
(b) ‘She blicked her!’ — person pulling another person’s leg
